

Business Analysis Career Perspectives

(and the future of the profession)

Ken Fulmer

IIBA

Presentation Objectives

- 1. Examine the marketplace and directions of the Business Analyst career path.
- 2. Focus on the core skills and the new skills required in a changing marketplace.
- 3. Examine the BA role and how it will be expanding in the future.
- 4. Examine the IIBA and how it intends to support the members and chapters in this changing marketplace.

The Marketplace side

- Business Analysis profession is growing
 - Department of Labor sees career continuing to grow by about 25%
 - Primary growth is around technology and digital systems area.
 - BA roles found within IT, and also embedded in the business lines
-
- Is this demand the same as our current role definition?
 - Some yes, but it is rapidly evolving !!
 - IIBA survey from 2014 indicates more BA's have multiple roles
 - Agile Projects encourage a different approach to roles
 - Business continues to want more faster, and to do more with less

Expanded Generalist Role

- Key Future skills

- Expanded Role in pre-project level
 - Scope definition and Value
 - Project Solution approach
 - Change, Testing, deployment, adaption planning
- User Experience Design (UX)
 - Emphasis on **DESIGN** – “**Change by Design**”
- Data and Content Level –
 - Gartner concept of “citizen data scientist”
- Security and Risk planning
- Expanded Critical Thinking
 - People, Process, Information, and Technology
 - Data / evidence based analysis
- Visualization

The Specialist – including ‘Perspectives’

- IIBA currently has defined 5 “Perspectives”
 - Agile
 - Typical BA works as stakeholder proxy, or work with product owner or sponsor
 - Focus on evolving requirements and filters used to define iterations of work
 - Business Intelligence
 - Looks at analyzing data for business information and decision making
 - Information Technology
 - Broadly defined roles from user liaison to SME to system analyst
 - Business Architecture
 - Puts projects, process and information into larger business context
 - Business Process Management
 - Process centric organizational view – looks at work within and across functional areas

More kinds of Specialists -

Enterprise Architect

**Change Management Consultant

**Data Analyst

Information Architect

User Tester / Quality Assurance

**SME – packaged software specialist in application area

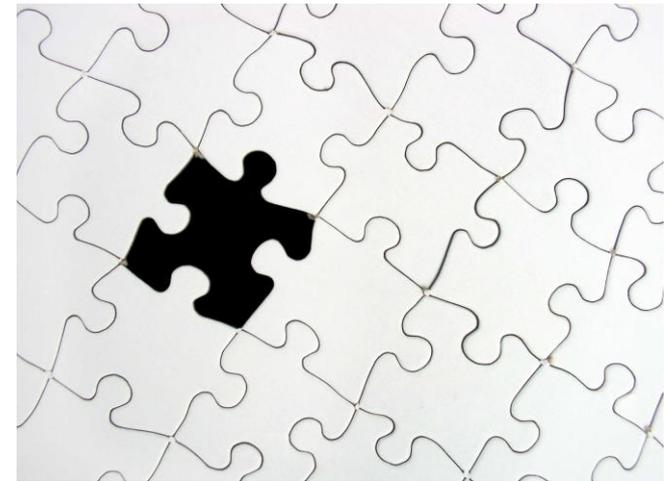

**Business Rules Analyst

**Product Manager (common in Marketing)

Security and Risk Management

Hybrid Roles – common current examples

- BA / PM
- BA / Tester
- BA / Developer
- BA / UX Designer

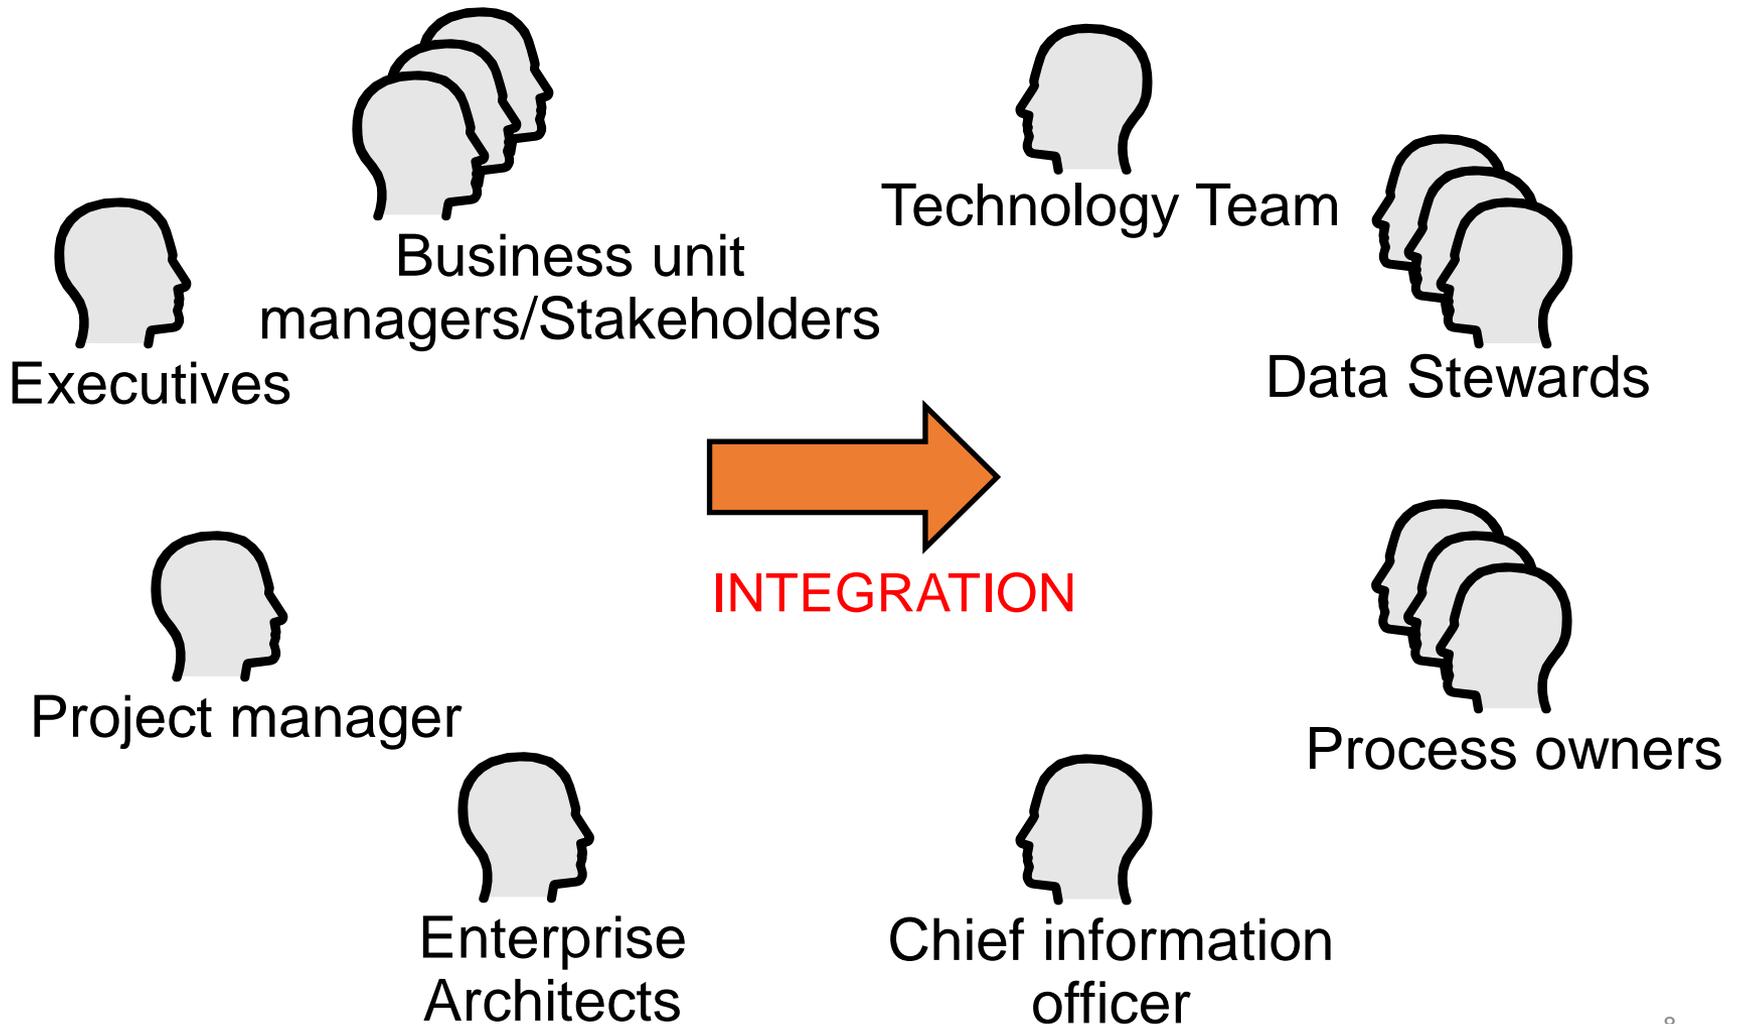

Enterprise Business Analysis and Strategy

- An organization's strategy:
 - Includes marketplace and top down elements but needs to be driven down to the programs, and projects to invest in – the portfolio view
 - Enterprise BA should be tied with the business to assess how the pre and post project elements create value and drive the change
 - Core expanded BA roles include:
 - Business Relationship Management
 - Business Architecture – Process Levels
 - Change Management – organization transformation
 - Business Case – the Benefits side facilitation
 - The business context of technology and data stewardship

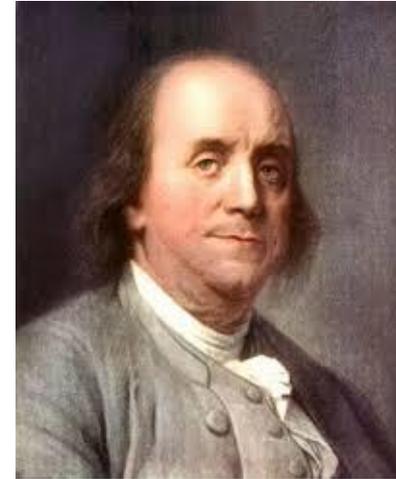

Integration is the real key to 'Better Business Outcomes'

New ERA for applying BA skills

Brilliant

- Driven by the Business and collaborative
- Recognizes stakeholder issues and is a trusted advisor
- Design becomes a new skill area
- Focused on Business Outcomes and Change

New Opportunity

1. **Business Analytics** – Data for information, decision, forecast, etc.
2. **Digital Business Analyst** – leveraging data and content to the market, and customer focus on the business model
3. **Customer Experience** – Outward focus that ties to the business model
4. **Agile – Product Owner Role**

Conclusions – beyond just the BA career

- More collaboration between BA and related areas
 - Take note of IIBA recent partnering announcements
- More linking of practice areas at the knowledge and practice level
 - Going beyond job titles – more expanded view of BA ‘discipline’
- Need for different approach to certification
 - More recognized by corporations and government
 - More based on competency than just knowledge of a standard
 - More need to remain current and relevant over time – re-certification
- More need for thought leadership across all Business Support areas
 - Business Analysis is one part of a large group of professions
 - We do need to “unite a community of professionals” for all of us to contribute to better business outcomes.

Recommendations

- ✓ Become a lifetime learner –
- ✓ Encourage a collaborative approach to solutions that focus on the ‘business outcome
- ✓ Be flexible but retain the core competencies of business analysis
- ✓ Be a trusted Advisor to the Business – your whole career
- ✓ Contribute to the profession / discipline of Business Analysis by pushing for recognition of the expanded role of the BA.
